

In regards to not allowing XM to broadcast weather and traffic, I would need to say that is wrong. The listeners of XM have gone to such a service to avoid needing to hear a TON of advertisements. All the FM/AM radio is, is a bunch of advertising! When I want to hear about the weather, or hear about the traffic alerts/updates, I want to hear it now, with zero interruptions. Please take into consideration all of our thoughts when you think about disallowing a great service.
